Мониторинг пакетных репозиториев

О докладчике

Маракасов Дмитрий Александрович

- Почти 15 лет в F/OSS
- Стараюсь контрибуть во всё что движется, коммитил в 200+ проектов
- FreeBSD ports committer с 2008 года, сделал 15k+ коммитов, сейчас поддерживаю около 380 портов

Хотелки мантейнера

«поддерживаю около 380 портов»

- А все ли они в актуальном состоянии?
- А не упустил ли я что-то?
- А что бы ещё опакетить?
- А насколько вообще полон и актуален мой репозиторий?

Частное решение

Мониторинг релизов

- По наличию tarball'ов «следующей» версии
- По регулярным выражениям на сайтах
- По тэгам в VCS

Recent CVEs CPE bindings

This is a list of recently published (in NVD) vulnerabilities linked to Repology projects. You may see vulnerabilities for a given project under CVEs tab (only present when there are matching vulnerabilities), and missing bindings may be reported via Report tab.

Highlighted entries indicate matches due to recently (<1 week ago) added CPE bindings.

Okular is available as a precompiled package in a wide range of platforms. You can check the package status for your Linux distro on the right or keep reading for info on other operating systems

Linux

Okular is already available on majority of Linux distributions. It can be installed directly from [Discover](#), [GNOME Software](#) or your distribution's [software store](#).

Flatpak

You can install the latest [Okular flatpak](#) from Flathub. Experimental flatpaks with nightly builds of Okular can be [installed from the KDE Flatpak repository](#).

Release Sources

Okular is released regularly as part of KDE Gear. If you want to build from source, you can check the [Build It section](#).

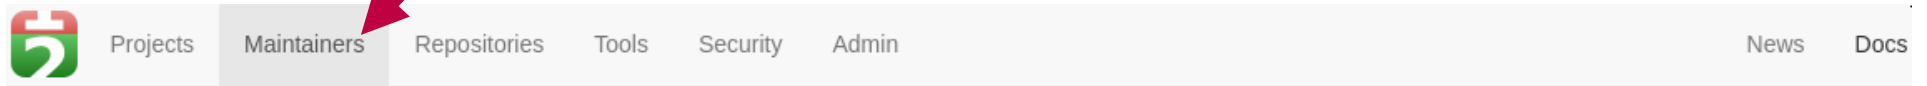

Windows

The [Microsoft Store](#) is the recommended place to install Okular, the version there has been tested by our developers and the Microsoft Store provides seamless updates when new versions are released. If for some strange reason you can't use the Microsoft Store you can try the stable version from [release nightly build](#). There are also [experimental nightly builds](#), for which testing and bug reports would be welcome.
